

## Problem A: Countdown

On New Year's Eve, a popular tradition is to have a countdown to midnight. Starting at some number **N**, people count down from **N** to 0 and then burst into celebration. Your task is to write a program that simulates this countdown.

### Input:

The first line of input provides the number of test cases, **T** ( $1 \leq T \leq 100$ ). **T** test cases follow. Each test case consists of one integer **N** ( $1 \leq N \leq 100$ ).

### Output:

For each test case, your program should output one line containing the countdown, which consists of **N+1** space-separated integers ending with an exclamation point.

### Sample Input:

```
2
3
5
```

### Sample Output:

```
3 2 1 0!
5 4 3 2 1 0!
```
